

URI: A descriptor for served binder and unix-sockets

```
message URI {  
    enum Protocol { NATIVE, LOCAL, HTTP, XMPP } protocol;  
    enum ObjectType { BASE, BINDER, UNIX_SOCKET } type;  
    optional string uuid;  
    optional int32 offset;           // Set if object in parcel.  
    optional string _interface;     // Set iff type is Binder.  
  
    optional string className       // Set iff protocol LOCAL/NAT  
    optional string host, port      // Set iff protocol HTTP/XMPP  
    optional string login, domain;  // Set iff protocol XMPP.  
}
```
